

ABSTRACT OF THE DISCLOSURE

A method for peeling a lens sheet having two pairs of opposite portions from a forming mold comprises the first to third peeling steps. The first peeling step is to pull up a pair of opposite portions of a lens sheet, which is formed on a forming mold, to peel partially the lens sheet from the forming mold. The second peeling step is to pull up the other pair of opposite portions of the lens sheet to peel partially the lens sheet from the forming mold. The third peeling step is to pull up further the two pairs of opposite portions to peel entirely the lens sheet from the forming mold.
